Gum Disease & Diabetes

From The President's Desk...

Dear Members and Friends Of MPDPA,

As we reflect on yet another remarkable year, I am filled with pride and gratitude for the unwavering dedication and support our members, our sponsors, traders, and friends of the Association have showed us.

Our annual events as featured in this newsletter, including the much-anticipated Dinner and Member's Night served as a celebration of MPDPA's achievements and the opportunity it has given for us to foster collaboration and camaraderie.

Looking ahead, we remain steadfast in our mission to support you through professional development, knowledge-sharing, and advocate for better policies.

Together, we can navigate the challenges of our evolving Profession and seize the opportunities to shape its future.

I extend my heartfelt thanks to all who have contributed to the success of MPDPA and encourage you to continue engaging with our programs and resources.

Let us move forward with renewed energy and a shared vision for a brighter, healthier tomorrow.

Warm regards,

A handwritten signature in blue ink, which appears to read "Jayaseel". The signature is fluid and stylized, with a long horizontal stroke at the end.

**Dr. Jayaseel Ramachandran
MPDPA President
2023-2025**

ABOUT NANO SILVER

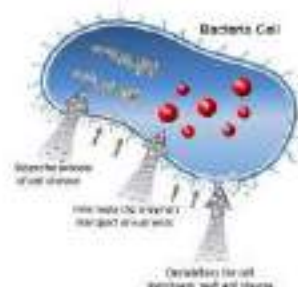

The antibacterial properties of silver has been known since the early days of mankind. Cooking utensils and cutlery were made of silver. Silver smiths were known to store their drinking water with a piece of silver placed in the water container to ensure bacteria-free water. Today, many water filters have added silver ions into the filtration material such as ceramic to enhance removal of bacteria and viruses.

TRUCARE NANO TECHNOLOGY

The word "nano" comes from Greek which denotes the smallest particle size. It is 100,000 times smaller than diameter of human hair of 1 billionth of a meter. TruCare nanotechnology contains submicroscopic colloidal silver particles suspended in distilled water.

BENEFITS OF NANO SILVER

- Enhances healing of wounds due to injuries
- Protects open wounds from infections
- Promotes healing of wounds caused by burns or scalding
- Known to be a natural antiseptic, anti-inflammatory, and disinfectant

TruCare Nano Silver Toothpaste is an all-in-one oral solutions that contains Ag⁺ RapidHeal Factor. Nano Colloidal Silver heals ulcers, gum aches, as well as sore throats, and fights off microbes and other pathogenic organisms that are known to be the cause of bad breath.

The use of Ag⁺ RapidHeal Factor is an outcome of years of research, resulting in a "one of a kind" formula that contains sub-microscopic, positively charged silver particles that are suspended in aqueous solutions, designed specifically to eliminate microbes and accelerate the human body's natural healing process.

Benefits of Nano Colloidal Silver (also known as Ag⁺)

- + Protects against bacteria
- + Soothes gum aches
- + Heals ulcers
- + Eliminates bad breath
- + Strengthens weak enamel
- + Whitens teeth by gently removing stains

Ag⁺ RapidHeal Factor is TruCare's proprietary term that is used to signify a specific concentration of Nano Colloidal Silver. Based on internal testing and user testimonials, the TruCare Nano Silver Toothpaste has proven speed the healing process of ulcers and other oral care concerns.

Gum Disease and Diabetes : A Risky Relationship for Blood Glucose Control

Professor Dasan Swaminathan
Consultant Periodontist

Diabetes and Gum Disease (Periodontal Disease): A Growing Concern

Diabetes is becoming a global health crisis, with over 346 million people affected worldwide. By 2030, this number is expected to rise to 439 million, nearly 10% of the adult population, according to the World Health Organization.

Diabetes occurs when the pancreas is unable to produce enough insulin or the body cannot use insulin effectively. Insulin helps glucose enter cells to provide energy. Without sufficient insulin, glucose builds up in the blood, leading to the complications of diabetes. One of these complications is gum disease, particularly periodontitis, an advanced form of gum disease. Periodontitis affects nearly 50% of adults and up to 60% of those over 65, with severe cases impacting 10–15% of the population. It is a chronic disease that can only be prevented rather than be cured.

The primary cause of gum disease is bacterial plaque biofilm, which accumulates on the teeth and gums when oral hygiene is poor. If left untreated, plaque biofilm can damage the gums, periodontal ligaments, and even the bones that support your teeth, leading to tooth loss. Once the disease is established, the damage that has occurred is irreversible. What is lost remains lost unless treatment to salvage some of the lost tissue is carried out.

The Two-Way Relationship Between Diabetes and Gum Disease

Image 1

Diabetes can both contribute to and be worsened by gum disease, creating a harmful cycle. Poor glycaemic control and tooth loss will eventually occur if untreated.

1. How Diabetes Affects Gum Disease:

High blood sugar levels in people with diabetes provide an ideal environment for bacteria in the mouth to thrive. This can worsen gum disease, leading to more severe inflammation and destruction of the tooth-supporting structures.

2. How Gum Disease Affects Diabetes:

Infections from gum disease can make it more difficult to control blood sugar levels. The inflammation from gum disease spreads into the bloodstream, which disrupts the body's immune system and worsens blood sugar regulation. Although diabetes does not directly cause gum disease, it makes the gums more susceptible to infection, accelerates tissue damage and slows down healing after treatment.

3. Signs of Gum Disease

If you have diabetes and notice any of the following symptoms, you may have gum disease:

- Red, swollen, or bleeding gums
- Bad taste in the mouth
- Teeth that appear longer or are loose
- Increasing gaps between teeth
- Hard deposits (tartar) on teeth

4. Nutrition for Bacteria

The higher glucose levels in the mouths of diabetic patients especially in the gum fluids can change the balance of bacteria within the gums, creating an environment where harmful bacteria thrive. This accelerates the destruction of gum tissue and increases the severity of gum disease.

Clinical Pictures

Image 2 (Before treatment):

A 52-year-old woman with poorly controlled type 2 diabetes shows significant gum swelling, redness, and discharge due to poor oral hygiene.

At the time, her blood sugar was high, and she was referred to her healthcare provider.

Image 3 (After treatment):

Three months after gum treatment, the woman's gums have improved. While her oral hygiene could still be better, her gums have healed and her blood sugar has become more stable after consulting her healthcare provider.

Image 4 (Periodontal Abscess):

A 57-year-old man with poorly controlled type 2 diabetes shows a gum (periodontal abscess) in the lower molar area. Gum abscesses are more common in diabetics because the glucose in their gum tissue provides a food source for harmful bacteria.

What to Do if You Have Diabetes

New Diagnosis of Diabetes:

If you have just been diagnosed with diabetes, schedule a dental check-up right away. People with diabetes are at higher risk for gum disease, so early detection and treatment are crucial

First Dental Visit:

When attending your first dental appointment as a diabetic patient:

1. Try to schedule your visit in the morning.
2. Take your prescribed diabetic medications as directed before the appointment.
3. Inform your dentist about any medications you are taking.
4. Follow up with any necessary treatment and attend all follow-up appointments.

Oral Healthcare for Diabetics

1. Monitor for Other Oral Problems:

People with diabetes should be checked for additional oral health issues, such as dry mouth, burning sensation and candida infections.

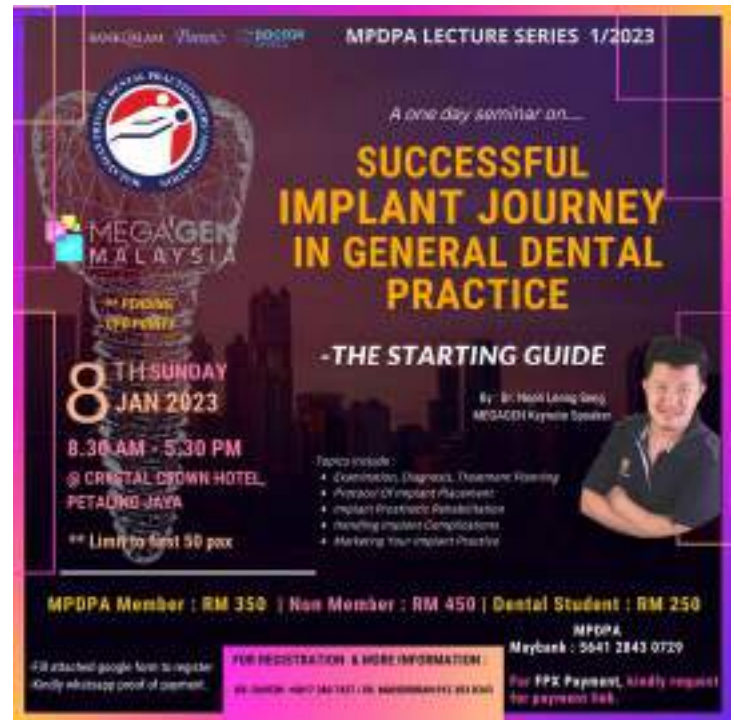

2. Oral Health in Children and Teens:

3. Children and adolescents with diabetes should have an annual oral screening to detect early signs of gum disease starting at age six.

4. If your oral healthcare provider notices worsening gum disease or other risk factors for diabetes, seek medical advice and undergo blood tests to check for diabetes.

MPDPA collaborated with MEGAGEN to organise a Basic Implantology Seminar, aimed at equipping dental professionals with foundational knowledge and skills in implantology. The event featured a full day seminar, case discussions while providing participants with a comprehensive understanding of implant techniques, patient selection, and treatment planning.

Lunch & Fellowship...

6th MPDPA ASEAN DSA CONGRESS & TRADE EXHIBITION 2023

The 6th MPDPA ASEAN DSA Congress was successfully organised by Organising Chairperson Dr. Patricia Murugasu.

The Congress was dedicated to celebrating and advancing the vital role of DSAs in modern dentistry as per the theme 'Be Savvy in Your Clinic'.

The Congress featured an engaging lineup of expert speakers :

- Dr. Ahbirami Supramaniam, Head Of Programme , Diploma in Dental Surgery Assistant ,Faculty Of Dentistry, MAHSA University who conducted a role play session on 'Your Smile Creates A Lasting First Impression'
- Dr.Cheng Qing Cheng from GC Dental, who conducted a hands-on workshops on 'Management of Dental Materials to Prevent Wastage'
- A group activity on dental charting and BP, Diabetic, recording by Assoc.Prof.Dr.S.Ratnasothy.
- Makeup tutorial by Puan Milla Jastina, Senior Sales Director from Mary Kay.

Attendees had the opportunity to enhance their clinical skills, stay updated on the latest industry practices, and network with peers and went home with lucky draws sponsored by the Committee and Traders.

THE ALIGNER TRANSFORMATION

ALIGNERS VS BRACES

SUNDAY
25TH JUNE 2023
8.30 AM - 5.30 PM
PJ HILTON, HOTEL

Dr. Puvan
Orthodontist
Bachelor of Dental Surgery, MBChB, MRD, MRD (Ortho)
Member of the Royal Society of Orthodontists (RSO)
Member of the British Orthodontic Society (BOS)
Member of the Indian Orthodontic Society (IOS)

PERSONAL CASE DISCUSSION :
BRING AN ALIGNER CASE & LET'S TROUBLESHOOT TOGETHER !

- CLINICAL ASPECT OF ALIGNERS
- TRANSFORM YOUR PRACTICE WITH DIGITAL DENTISTRY

“Aligners Vs Braces”

Our invited guest speaker and Consultant Orthodontist Dr. Puvan explored the differences between aligners and traditional braces highlighting their benefits, limitations, and clinical applications. Aligners, known for their aesthetics and comfort, offer removability and ease of hygiene maintenance, making them appealing to adult and lifestyle-conscious patients. Braces, however, remain a reliable choice for complex malocclusions, providing greater control in tooth movements. The discussion included treatment timelines, patient compliance, cost considerations, and case selection criteria. Dr. Puvan also gave us a brief overview on Invisalign, navigating through its software and a glimpse on how to go about using it to plan an Invisalign case.

ALWAYS GETTING TO THE R T --- OF THE PROBLEM

This seminar addressed troubleshooting clinical failures in dentistry, covering multidisciplinary topics such as :

- Informed consent In orthodontic treatment – risks that patient needs to know
(By: Dr. Yasmin Kamaruddin, Orthodontist)
- Failures in endodontics
(By, Dr, Raghavendra,Endodontist)
- Management of minor oral surgical complications in general practice
(By : Dr.Wong Foot Meow, OMFS)
- Periodontal assessment; minimize failures and improve success in your practice
(By : Assoc Prof. Dr. Padmini Hari)

The seminar concluded with a sponsored hands-on workshop by Sanctuary on ' 30 second solution to isolation – learn to efficiently place a rubber dam'. We thank our Committee Member Dr.Davina Kaur for organizing and conducting this workshop with great success. Participants went home delighted with a goodie bag each containing rubber dam materials and stationaries.

Dr.Yasmin Kamaruddin
Orthodontist

Ms.Darsh from Doctor Shield

AGM 2023

The 55th Annual General Meeting (AGM) of the MPDPA began with an insightful pre-AGM talk, setting a thoughtful and engaging tone for the event. The talk, delivered by our esteemed speaker, Dr. Murugamoorthy, a fellow MPDPA Member and Psychologist, focussing on 'Emotional Intelligence : ; Feelings In The Dental Clinic' offering valuable insights and inspiration to attendees.

"Feelings In The Dental Clinic"

Following the Pre AGM talk, the AGM proceeded with a review of the Association's achievements, financial reports, and updates from the past year. Key agenda items included strategic plans for the coming year, member discussions, and elections for the new term.

The event concluded with dinner, fellowship fostering unity among members as we move forward together.
